

Tender specification:

Oventrop wafer pattern butterfly valves (DN 50 up to DN 300) for installation between two flanges according to DIN EN 1092-2 (PN 6, PN 10 or PN 16) and lugged pattern butterfly valves (DN 50 up to DN 600) for installation between two flanges according to DIN EN 1092-2 (PN 10 or PN 16 for DN 50 up to DN 150; DN 200 up to 600 only for PN 16).

Technical data:

Max. operating pressure p_s : PN 16

Operating temperature t_s : -10 °C up to +120 °C

Pipe fitting for operation with non-aggressive, harmless fluids (e.g. water or suitable water and glycol mixtures according to VDI 2035/ÖNORM 5195).

Body made of nodular cast iron EN-GJS-400-15 (EN-JS-1030)

Stem made of stainless steel AISI 420

Flap made of stainless steel AISI 316 (CF8M)

Liner made of EPDM

Stems with O-ring seal

The butterfly valves must only be used as terminal valve with fitted blind flange.

DN	k_{vs} values
50	147
65	290
80	450
100	730
125	1,260
150	1,990
200	4,390
250	4,500
300	6,800
350	8,900
400	11,500
450	15,000
500	18,800
600	27,600

Advantages:

- compact construction
- quarter turn operation of the lever for a quick isolation
- snap-in lever
- installation in any position
- low pressure loss due to centrally mounted flap and flow-supporting construction
- extended stem for an easy insulation of the pipework

Application:

Oventrop butterfly valves are installed in the risers of hot water central heating systems, cooling systems and industrial plants with closed circuits.

Due to the special construction of the butterfly valves, the isolation function is given even where space is limited.

The internal liner guarantees a safe sealing of the stem conduits and the flanges against escaping fluid.

Additional counter flange seals are not required. The fluid only comes into contact with the flap and the liner.

Dimensions

Installation advice:

Before installation please make sure that the surfaces of the flanges comply with DIN EN 1092-2 (PN 6, PN 10 or PN 16) and that they are installed in parallel with a sufficient distance to each other.

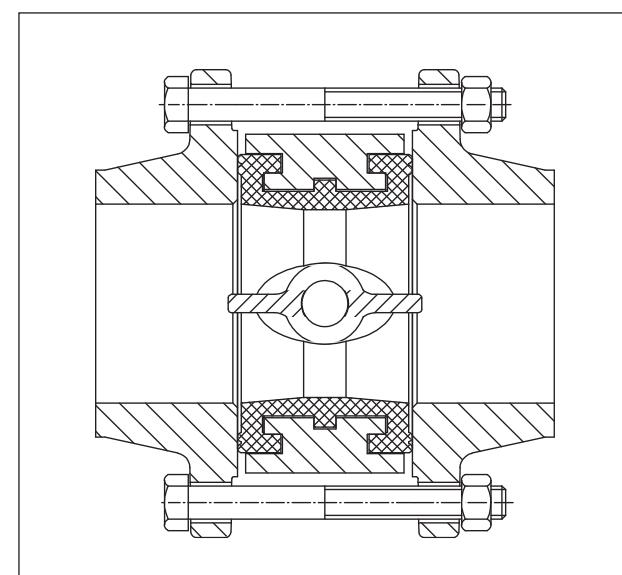

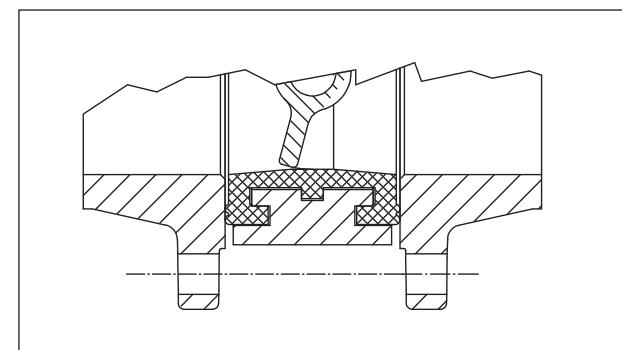

An exact alignment of the Oventrop butterfly valves with the adjoining flanges is very important:

- Fully use the sealing surfaces between butterfly valve and the flange
 - Avoid damage to the internal flap during opening
- Open the butterfly valve slightly before installation.

When tightening the screws of the flange, the butterfly valve must be fully open to make sure that the initial torque when actuating the valve is not too high due to the deformation of the liner.

Additional flange seals are not required.

Tighten the screws crosswise.

Subject to technical modifications without notice.
