Product range

Electromotive actuators  
systems “**E13**, LON®”

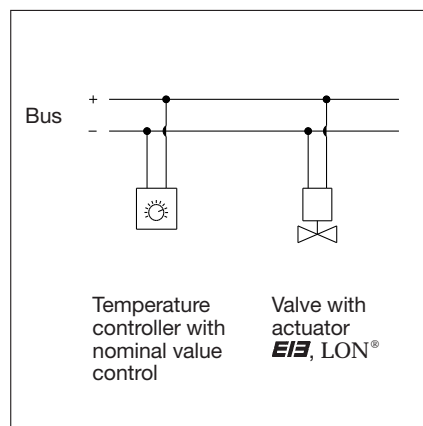

1

2

3

All radiators with integrated distributors or valves with connection thread M 30 x 1.5 or squeeze connection may be externally regulated with the help of the electromotive actuators **EIB** and **LON®**.

The electromotive actuator **EIB** is suitable for a direct connection to the European installation bus control system.

The power absorption is extremely low so that a separate power supply is not needed.

The electromotive actuator **LON®** is suitable for a direct connection to **LONWORKS®** networks. The power absorption is extremely low so that a separate power supply is not needed when using the Link-Power-Technology.

Moreover, the actuators for both bus systems are equipped with an integrated binary entry to which e.g. a window contact may be connected. The connection of the bus and the binary entry is made via a 4-core cable.

When putting the electromotive actuators into operation, they are automatically adjusted to the mounted valves.

When installing **EIB** systems (Twisted Pair) and **LONWORKS®** networks (Link-Power), connection is carried out with only one cable, a pair of wires, communicating with each other via all installation components.

A 3.5" diskette with the Oventrop specific data of the actuators is available free of charge. The data can be loaded onto the ETS data bank or the **LonTalk®** software.

**LON®, LONWORKS®** and **LonTalk®** are registered trademarks of the company "Echelon Corporation".
