

Regudis W-HTE Maintenance protocol - heating centre

Dat	e			
Address installation location / building				
Address operator				
Address installation company				
Please provide reasons for any items not carried out or answered No in the Remarks field!		Tick as appropriate or enter value/number		Remarks
Insta	ıllation heating centre	Yes	No	
1	_			
1	Number of installed dwelling stations		stations	
2	Output, type and version of the heat generator	kW		
3	Storage cylinder volume		ı	
4	Which setpoint temperature for the storage cylinder has been set at the heat generator?	°C		
5	Circulation pump designation			
5.1	Set delivery head		m	
5.2	Operating mode: Constant pressure			
6	Operation from the buffer storage cylinder to the dwelling stations unmixed [then continue with item 7] or mixed?			
6.1	Has a Regtronic RD-W been installed in a mixed heating circuit?			
6.2	Set flow temperature in the mixing circuit		°C	
7	System pressure primary side		bar	
8	Has a safety valve been installed in the primary circuit?			
9	System pressure potable water side		bar	
10	Has a safety valve been installed in the potable water circuit?			
				swered No in the Remarks field! I is recommended

Mair	ntenance work modules and accessories			
1	Has a ball valve connection set been installed?			
1.1	Are the shutoff valves open and free-moving?			
2	Has a derivative temperature control set been installed?			
2.1	Set temperature Recommended: >10K below the flow temperature		°C	
3	Has an upper thermal insulation shell been installed?			
4	Has a potable water circulation module been installed?			
4.1	Set circulation cycles			
4.2	Has a function set of the check valve been carried out?			
5	Has a flow temperature control module been installed?			
5.1	Set flow temperature			
5.2	Has the safety temperature monitor been installed correctly?			
5.3	Has the electrical connecting block with pump logic been installed correctly (pump starts when room thermostat is activated)?			
5.4	Set delivery head of the pump of the mixed heating circuit	m		
5.5	Is the pump in constant pressure mode?			
6	Have heating circuit connection pieces been installed for the combination of an unmixed and mixed heating circuit?			

/	module been installed correctly?				
7.1	Set hot water temperature on the instantaneous water heater module		°C		
8	Other installed modules and accessories				
Rep	air work (complete only if components a	are repaired o	replaced)		
1	Which component has been replaced?				
1.1	Reason for replacement				
2	Which component has been replaced?				
2.1	Reason for replacement				
3	Which component has been replaced?				
3.1	Reason for replacement				
4	Has the functional test been carried out in accordance with the operating instructions after the repair work?
