“Aquastrom C” Double regulating and commissioning valves for circulation pipes in potable water installations

Technical information

Function:

Oventrop double regulating and commissioning valves “Aquastrom C” are installed in the circulation pipes of potable water installations and serve to achieve a hydronic balance between the various circuits of the system.

The balance is achieved by a presetting with memory lock.

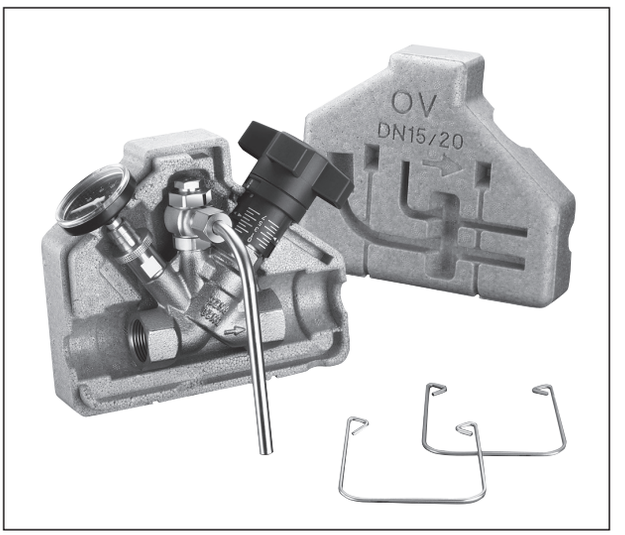
The required presetting values can be obtained from the flow charts. All intermediate values are infinitely adjustable.

The selected presetting can be read off two scales (basic scale and fine adjustment scale, see illustration presetting). The Oventrop double regulating and commissioning valves have two threaded ports which are closed with a blind plug and a draining valve for hose connection which is equipped with a thermometer. The draining valve allows draining off the system for maintenance or repair. The threaded ports may also be equipped with fill and drain ball valves or pressure test points for the measurement of differential pressure. When installing the valve it must be ensured that the direction of flow conforms to the direction of the arrow on the valve body and that the valve is installed with a minimum of L = 3 x Ø of straight pipe at the valve inlet.

Advantages:

- the location of the functional components in one plane allows for a simple assembly and easy operation
- only one valve for 5 functions
  presetting
  isolating
  temperature display
  draining
  measuring (pressure test points, see accessories)
- infinitely adjustable presetting, exact measurement of pressure loss and flow via the pressure test points (accessories)
- draining valve for hose connection, plug, fill and drain ball valve and pressure test point with O-ring seal towards the valve body
- with insulation
- DVGW, SVGW, KIWA, ASC, VA and WaterMark certified

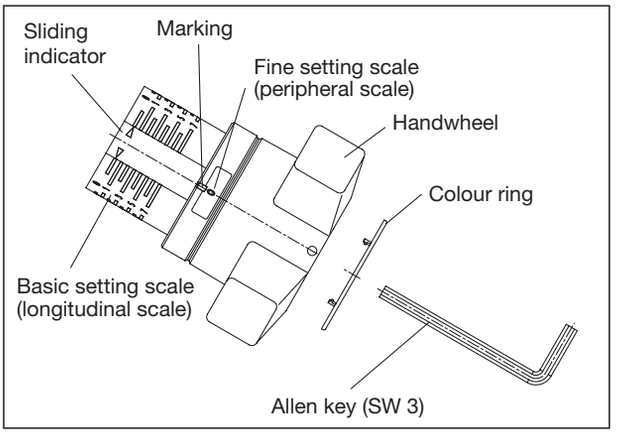
“Aquastrom C”



“Aquastrom C” with insulation and “Aquastrom P”

Presetting:

1. The presetting value of the valve is set by turning the handwheel.
   a. The display of the basic setting is shown by the longitudinal scale together with the sliding indicator.
      Each turn of the handwheel is represented by a line on the longitudinal scale.
   b. The display of the fine setting is shown by the peripheral scale on the handwheel together with the marking. The subdivisions of the peripheral scale correspond to 1/10th of a turn of the handwheel.
2. Limitation of the presetting value by turning the inner adjustment stem clockwise until it seats. This can be done using the long end of a 3 mm Allen key.



Double regulating and commissioning valve “Aquastrom C” Tender specification:

Double regulating and commissioning valve PN 10 for potable water installations, DVGW, SVGW, KIWA, ASC, VA and WaterMark certified, both ports with male thread according to DIN ISO 228 for flat sealing couplings, temperature range up to 90 °C, oblique pattern with secured, infinitely adjustable fine presetting controllable at any time, thermometer for temperature monitoring, draining valve for hose connection for draining off the riser, optical display of the presetting depending on the orientation of the handwheel, valve body and bonnet made of bronze, disc and stem made of brass resistant to de-zincification (DZR), disc with PTFE seal, maintenance-free stem seal due to double O-ring, all functional components in one plane.
Double regulating and commissioning valves both ports with male thread according to ISO 228 for flat sealing couplings

Size DN 32

Note regarding charts:

Avoid valve settings below the recommended range of setting. Too high a differential pressure across the valve unit may lead to noises and may cause damage to the valves.
