

Application:

Oventrop compact distributor for the connection of the Regumat stations DN 25 (Regumat DN 32 with connection fittings)

Consisting of distributor, insulation and wall bracket including fixing material.

The distributor is, for instance, used for volume flow distribution from the heat generator to several heating circuits.

Advantages:

- space-saving and simple installation
- problem-free water distribution even for small performance ranges

Models:

for 2 heating circuits
for 3 heating circuits
for 4 heating circuits
for 5 heating circuits
for 6 heating circuits
for 7 heating circuits
for 8 heating circuits

Item no.:

1351582
1351583
1351584
1351585
1351586
1351587
1351588

Materials:

Distributor: Steel, primed black
Insulation: Expanded polypropylene
Wall bracket: Steel, galvanised

Connections:

To the heating circuit: G 1½ collar nut, flat sealing
To the boiler: G 1½ male thread, flat sealing

The direction of flow must be observed!

Technical data:

Max. operating pressure p_s : 4 bar
Max. operating temperature t_s : 110 °C
Max. flow rate: 4 m³/h
Recommended application range: max. 95 kW ($\Delta T = 20K$)

Dimensions distributor DN 25, 2-fold

Dimensions distributor DN 25, 3-fold

Dimensions distributor DN 25, 4-fold
